SUMMARY

Data Analyst with proven experience in data processing, statistical analysis, and building automated reporting solutions. Skilled in Python, SQL, KNIME, and data visualization tools (Tableau, Power BI), with a track record of transforming complex datasets into actionable insights. Experienced in ETL pipeline development, KPI monitoring, and predictive modeling for manufacturing and business optimization. Strong analytical mindset with expertise in identifying trends, detecting anomalies, and supporting data-driven decision-making.

SKILLS

Programming & Data Processing:
Python, SQL, Spark, Pandas, NumPy, Java.

Data Engineering & Cloud:
Apache Spark, Airflow, AWS (Glue, Redshift, Lambda, S3, Kinesis, Athena).

Databases & Analytics:
PostgreSQL, MySQL, MongoDB, Power BI, Tableau, Knime, Matplotlib.

EXPERIENCE

Data Analyst Working Student | Infineon Technologies AG

01/2026 – Present

- Developed automated KPI monitoring reports for wafer test department using KNIME and Tableau, improving data visibility and decision-making efficiency.
 - Built Python-based predictive modeling solution to analyze wafer test data, reducing retest time.
 - Processed data from multiple sources using KNIME workflows, implementing anomaly detection algorithms to identify quality issues early.
 - Collaborated with process engineers to optimize data extraction and statistical analysis processes, creating automated scripts for big data processing.
- Tools:** Python | KNIME | Tableau | SQL | Statistical Analysis | Jira

Data Engineer Intern | Smart Information Trade

02/2024 – 09/2024

- Designed and implemented 4 ETL layers for data warehouse projects using AWS and Python.
 - Automated AWS-based data workflows for efficient processing and transformation, reducing manual processing by 20+ hours per week.
 - Implemented data validation checks and documentation for reliable data.
 - Collaborated with cross-functional teams to analyze requirements and ensure robust integration of data systems.
- Tools:** Python | SQL | AWS | Git | PostgreSQL

Data Engineer Intern | Digital Research & Technologies

04/2023 – 10/2023

- Built 3 ETL pipelines with Python, SQL, and AWS Glue for data ingestion and transformation.
 - Optimized Redshift and MySQL queries, accelerating reporting.
 - Acquired datasets via Selenium and BeautifulSoup, integrating into data pipelines.
 - Delivered 3 interactive dashboards used by 10+ analysts for decision-making using Python and Power BI dashboards.
- Tools:** Python | SQL | AWS | Pandas | Selenium | BeautifulSoup.

PROJECTS

- Sales Analytics:** Building a modern data warehouse with SQL server, Include ETL processes, data modeling, and analytics. 10/2025
- Nouvelair Flight Delay:** Deployed a serverless AWS pipeline with Python and Power BI for real-time flight delay insights. 05/2025
- Spam Email Detection:** Created an ETL pipeline with Python to process email data, integrate ML-based spam detection. 03/2025

EDUCATION

- Master’s degree in Scientific Instrumentation**

Ernst-Abbe-Hochschule Jena- University of Applied Sciences, Jena, Germany
- 10/2025 – Present
- Exchange Student in Data Science**

Schmalkalden University - University of Applied Sciences, Schmalkalden, Germany
- 04/2024 – 05/2025
- Master’s degree in Data Science**

Monastir University - Faculty of Science, Monastir, Tunisia
- 10/2022 – 09/2025
- Bachelor’s degree in Applied Mathematics**

Monastir University - Faculty of Science, Monastir, Tunisia
- 09/2018 – 06/2022

LANGUAGES

English - Professional Proficiency

French - Intermediate

Arabic - Native

German - beginner
